

The complete solution
in **climate control**
by zones

BUSing®

ZBUS.

Air conditioner

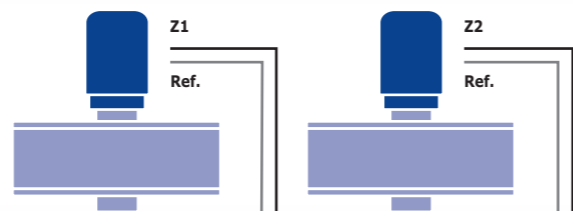

- 1 Direct option**
Through the integrated Cold/Heat demand controls connection.
- 2 BUSing® option**
Using gateways for the air conditioner control.

Underfloor heating

...up to 8 zones

Electrovalve - Zone 1 Electrovalve - Zone 2

Motorized grilles

Grilles - Zone 1 Grilles - Zone 2

The complete solution in climate control by zones

Our system automatically manages all the elements of a climate installation, so the user can simply choose the desired temperature.

The **MasterClima-Z** unit is responsible for facilitating the entire zoning process. It has BUSing® and ZBUS connection:

MasterClima-Z

Central unit for climate control by zones.
Up to 8 zones* of underfloor heating, BUSing® and ZBUS, connections, and separate Cold/Heat demand control.

* Maximum 16 zones per installation, using two units.

4-wire cable
+12V, A, B and Ref.

2-wire cable without polarity
Controls motorized grilles and thermostats of each zone.

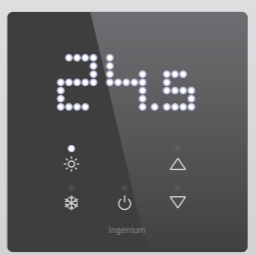

→ **RejiBUS-Z**
Devices for the control of motorized grilles.
Zone ID selector with potentiometer.

Cubic-TZ

Zone thermostats
Available with or without display.

Cubic-TLZ

Zone ID selector by push-buttons.

The new ZBUS connection simplifies the installation of zone thermostats and motorized grilles control devices, thanks to its simple two-wire system with no polarity.

Through BUSing® communications protocol, the climate installation can be completed with air conditioning control devices.

It also allows home automation integration with other smart house elements, and remote control devices such as touchscreens, mobile, tablets...

Remote access

BUSing® allows you to control the installation using our touch screens and applications for mobile devices.
